

The Earth Moved: on the remarkable achievements of earthworms.

By Stewart, Amy

Frances Lincoln, 2004 9780711224506, 2004. Hardcover. Book Condition: New. Dust Jacket Included. NEW hardback in d/w. 223 pages. A fascinating book exploring the secret world of earthworms. Darwin devoted the last years of his life to the study of these humble creatures. As the blurb to this book says, the earthworm "may be small, spineless and blind, but its role in the ecosystem is profound. It tills the soil, destroys microscopic organisms that cause plant disease, breaks down toxins and turns the ground into rich compost, creating the most fertile areas on earth. In this witty and offbeat encomium to this humble creature, Amy Stewart weaves her own back garden investigations with those of the eccentric oligochaetologists who have made the close study of worms their personal obsession. From the legendary giant Australian worm that burrows up to fifteen feet below the ground to the modest nightcrawler that inspired Darwin to write his last book. The Earth Moves finally gives worms their due".and I don't know about you, dear reader, but this bookseller has just learned two new words!.
